

PROFESSIONAL SUMMARY

DevOps Engineer with 5 years at Accenture specializing in CI/CD tools administration and large-scale CI/CD infrastructure management across on-premise, Azure and OCI environments. Administers GitHub (SaaS), GitHub Actions, Jenkins, GitLab and Azure DevOps within a centralized DevOps operations program serving 40+ business verticals and a large enterprise developer base. Manages Sonatype Nexus artifact repositories, Docker/Kubernetes-based CI/CD infrastructure on VMs and AKS/OKE, and Grafana/Prometheus observability with dashboards, alerting and log analysis. Experienced in incident resolution, change tasks, tool upgrades and release validation within SLAs for clients including Aramco Digital, NEOM, Fisher Investments and Brighthouse Financial. Python (basic) with AI-assisted development through Claude Code, GitHub Copilot and OpenAI Codex; working knowledge of GenAI fundamentals — prompt engineering, RAG concepts and LLM basics.

CI/CD tools administration | GitHub SaaS & GitHub Actions | Jenkins | Sonatype Nexus | Docker & Kubernetes | Grafana & Prometheus alerts and dashboards | Terraform IaC | Incident & change management | Runbooks | GenAI fundamentals (prompt engineering, RAG)

TECHNICAL SKILLS

CI/CD Tools & Administration GitHub (SaaS); GitHub Actions (workflows & runners); Jenkins; GitLab; Azure DevOps; YAML pipelines; tool upgrades, change tasks and release operations	Artifact & Repository Management Sonatype Nexus repository administration; Azure Container Registry; Oracle Container Registry; air-gapped artifact handling; release validation
Containers & Orchestration Docker; Kubernetes (AKS / OCI Kubernetes); Helm charts; managing and scaling Kubernetes-based applications and CI/CD infrastructure	Observability & Monitoring Grafana dashboards; Prometheus metrics and alert rules; alert configuration; log analysis; capacity, performance and error-rate metrics; RabbitMQ
Cloud & Infrastructure Microsoft Azure; Oracle Cloud Infrastructure (OCI); Terraform IaC; VM- and Kubernetes-based infrastructure across on-premise-portable and cloud patterns	Scripting & Automation Python (basic — productive via AI-assisted IDE workflows with Claude Code, GitHub Copilot, OpenAI Codex); Bash/Shell; Ansible (basic)
GenAI Fundamentals Prompt engineering; RAG concepts (ingestion, chunking, embeddings, indexing, retrieval); LLM basics with Cohere, Llama and Gemma exposure (non-production); Azure AI Foundry; Ollama	DevSecOps & Compliance Trivy; SonarQube; OpenSCAP; security and compliance automation integrated into CI/CD workflows

PROFESSIONAL EXPERIENCE

ACCENTURE SOLUTIONS PVT. LTD. — Cloud, DevOps & GenAI Engineer

Bengaluru, India | 2021 – 2026

Aramco Digital | Centralized CI/CD Operations — OCI Primary, Azure Secondary

- **CI/CD tools administration** — administered and supported GitHub (SaaS), GitHub Actions, GitLab, Jenkins and Azure DevOps as part of a centralized DevOps operations program onboarding 40+ business verticals, serving a large developer base with varied application stacks and tool preferences.
- **CI/CD infrastructure management** — provisioned and managed CI/CD infrastructure on VMs and Kubernetes (AKS) across OCI and Azure through Terraform, keeping deployment patterns cloud-agnostic and on-premise portable.
- **Incident & change operations** — responded to user-reported and alert-driven incidents on CI/CD tooling, and executed change tasks, upgrades, environment onboarding and post-change validation within agreed SLAs.
- **Monitoring & alerting** — configured Grafana dashboards and Prometheus alert rules for pipeline, runner and infrastructure health; performed log analysis for root-cause investigation and stability tracking.
- **Artifact & secrets management** — supported Sonatype Nexus repositories and cloud container registries; managed secrets through OCI Vault and Azure Key Vault.
- **Stakeholder coordination** — worked closely with engineering, platform and security teams across verticals to onboard pipelines, resolve issues and maintain system availability.

NEOM | Oracle Cloud Infrastructure — Cloud-Agnostic DevOps

- **Cloud-agnostic operations** — supported OCI-hosted environments while maintaining a largely cloud-agnostic CI/CD toolchain; provisioned infrastructure through Terraform with OCI Vault, Oracle Container Registry and OCI Kubernetes.
- **Deployment support** — supported Docker/Kubernetes and Helm deployments, CI/CD execution, environment configuration, release validation and issue resolution.
- **Runbooks** — created and maintained operational runbooks for recurring deployment steps and standard incident categories to reduce resolution time.

Fisher Investments | *Azure Production Deployment*

- **Production changes** — executed Terraform-based Azure production changes — new resource provisioning, upgrades, cleanup and controlled configuration updates — under formal change management.
- **Release governance** — supported deployment planning, release validation, troubleshooting and post-change checks; used Ansible for repeatable operational tasks.

Brighthouse Financial | *Azure Production Deployment*

- **Lifecycle management** — supported Azure production infrastructure lifecycle through Terraform — provisioning, upgrades, cleanup and environment changes across release cycles.
- **Release coordination** — coordinated deployment execution, configuration updates, validation and issue resolution, including scheduled release-window coverage.

INNOVATION & SELECTED CONTRIBUTIONS

OpenSCAP Compliance Automation

- Automated repeatable OpenSCAP vulnerability and compliance scanning with supporting execution and reporting steps; integrated Trivy, SonarQube and Sonatype Nexus into DevSecOps workflows.

GenAI Fundamentals — RAG & AI-Assisted Engineering

- Researched and supported RAG workflows using Azure AI Foundry and Ollama — document ingestion, chunking, embeddings, indexing, retrieval and grounded response generation — with hands-on prompt engineering.
- Exposure to Cohere, Llama and Gemma model families in research and internal settings (non-production); supported Kubernetes/Helm deployment patterns, RabbitMQ queuing and air-gapped artifact handling.
- Uses Claude Code, GitHub Copilot and OpenAI Codex daily for scripting, automation and research, with additional exposure to AI agents and Copilot Studio.
